Create new app

Centralized work. Endless possibilities. No coding needed.

Auclo is a centralized information management platform that helps businesses find, organize, and visualize data from multiple sources — without coding.

Auclo is a no-code/low-code information management platform for the internal building of various business applications — all without a single line of code written.

It bridges the gap between low-code and no-code. Auclo allows enterprise integrations and solves complex business cases as low-code does, while standing at affordable pricing and being fast as no-code. With Auclo, applications are produced within weeks, not months.

Key capabilities & benefits

Auclo helps you centralize information from multiple systems, eliminate manual work, and reduce development time and costs. You can build and launch tailored applications in days — fully customizable to your business needs. And as your processes evolve, Auclo scales with you.

Low-code/no-code platform

Build applications without extensive coding knowledge.

Custom interfaces

Create intuitive UI experience.

Centralize information

View and manage information from any source, in any wanted form.

Lower costs

Save time and reduce reliance on IT resources.

Scalable solutions

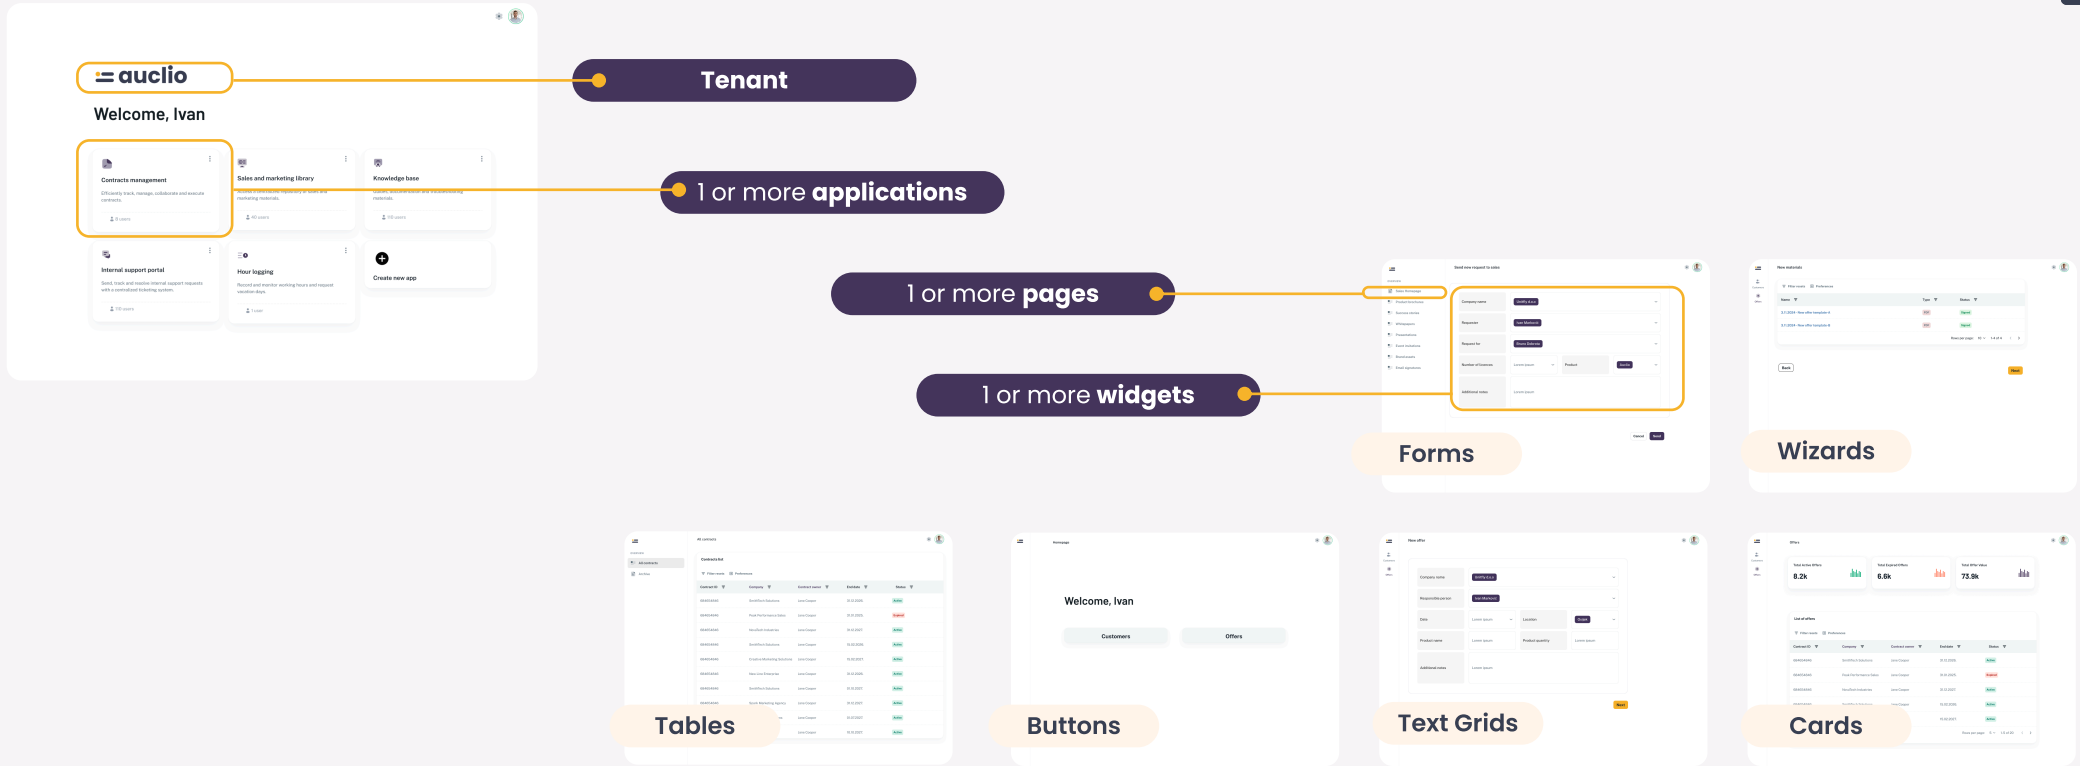

Adaptable for enterprises, small businesses, and ERP implementors.

Simplify and speed up complex custom projects

Build robust applications in weeks, not months — and without coding expertise.

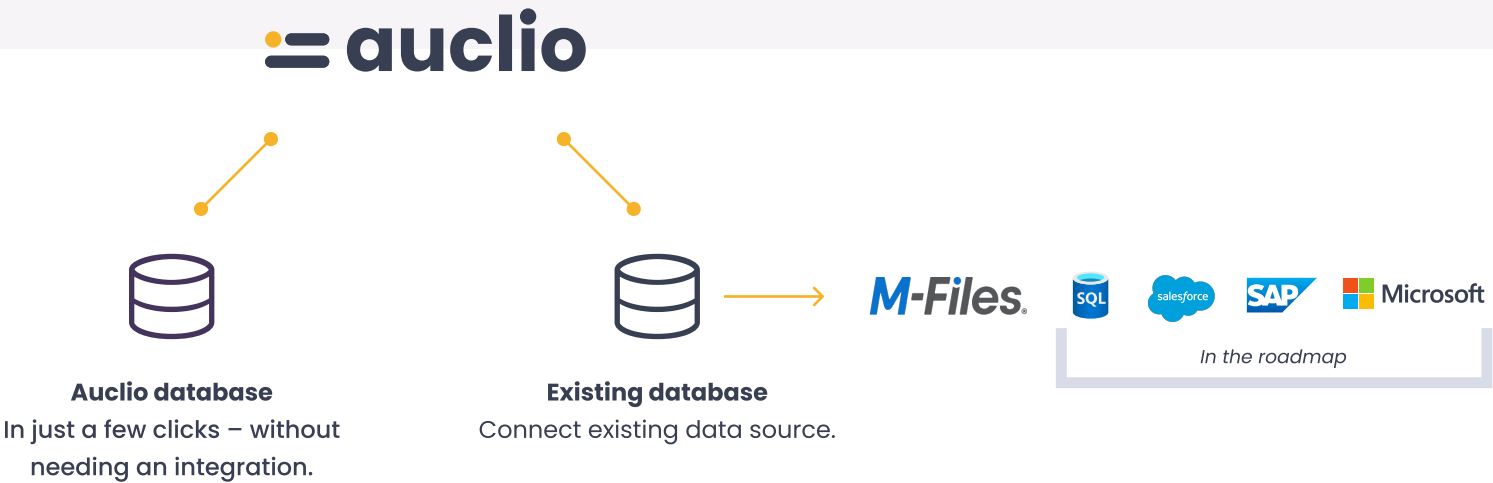

Who is Auclo for?

- **Enterprises**
 - Integrate multiple applications into a unified business center for all applications, tailored to each user's needs.
- **Small businesses**
 - Replace multiple spreadsheets with a single, customizable and efficient business application.
- **ERP implementation specialists**
 - Build custom applications and connectors to meet client demands, without the need for extensive coding.

Frontend

Backend

Use cases

- **Internal applications**
Build tools tailored to the needs of your various internal teams.
- **External applications**
Create portals for customers, partners, or vendors to submit information, track requests, or access documents.
- **Excel replacement**
Replace scattered spreadsheets with structured, scalable applications that reduce manual work and errors.

Common examples

Project management

Plan, assign, and monitor tasks, documents, and milestones — fully customized for your industry.

Forms management

Collect and manage data from forms — and route it into your business systems.

Simple CRM

Track leads, contacts, and communication — without relying on complex tools.

Customer & supplier portals

Share documents, submit forms, and streamline collaboration from a single interface.

Time & activity logs

Allow teams or contractors to log hours and activity for payroll or performance tracking.

Other applications

Build any tool your business needs — all tailored to your process.

Get started with Auclo

94%

The percentage of requirements that Auclo fulfilled the first enterprise pharma client. Now, the same client is building the second case with Auclo.

Step 1: Identify your needs

Pinpoint the process or problem you want to improve.

Step 2: Define the information

List the key information and how it should be displayed.

Step 3: Build
